

Changing brake pads

These are your new brake pads

First off, take out the screws of the caliper of

Pull a little and it will come out this is what you get. You can see the 2 brake pads from the outside.

Now we have to take out the old pads. TO do this you have out the little clip on the side.

Pull it as far as you can until it comes off.

When you took of the clip, a pin will come out.

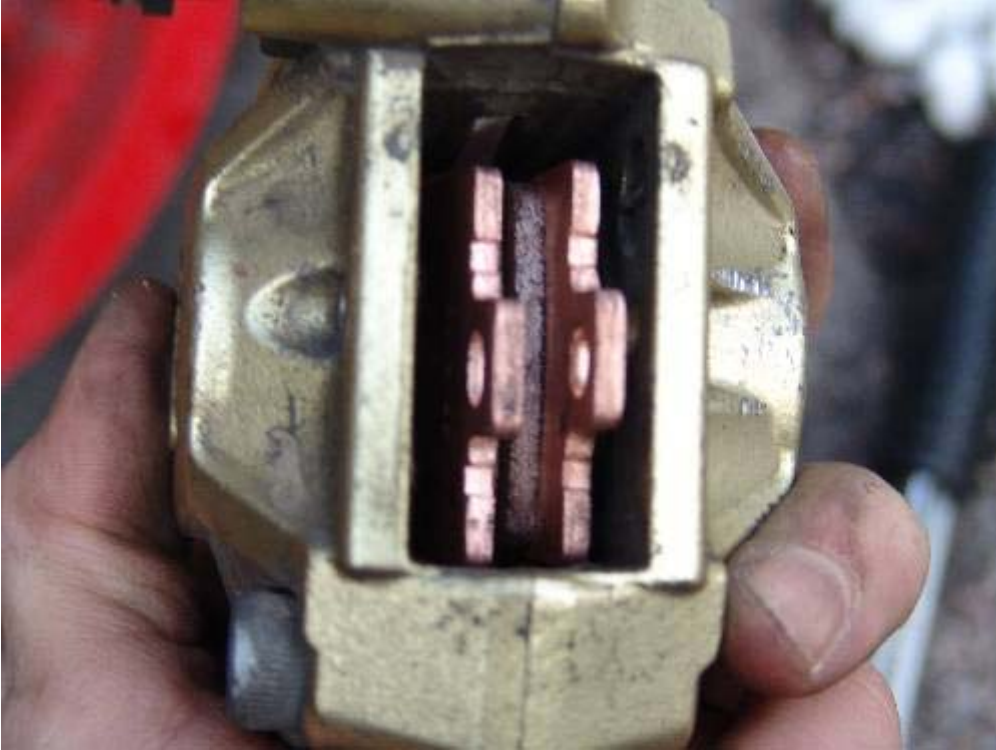

These are the 2 old brake pads that came off.

Take your 2 new ones off of the box.

Put the 2 brake pads together in the caliper like the old ones out.

Put back the pin to lock the pads together

Put back the clip on, and don't forget to lock it

Put back your caliper of your disc and don't forget to put the screws back on. And you're DONE!!
